

Dr. Dalia Karol

Gynecologic Reproductive Endocrinology & Infertility (GREI), McGill University

Why did you choose this fellowship? I chose to pursue a fellowship in Gynecologic Reproductive Endocrinology & Infertility (GREI) because I am passionate about supporting patients as they navigate complex reproductive challenges. During residency, I was particularly drawn to the unique combination of clinical endocrinology, advanced fertility treatments, and deeply patient-centered care that GREI offers. The opportunity to support individuals and families through some of the most challenging and meaningful moments of their lives was a major motivating factor in my decision.

What are the strengths of/why did you choose your specific fellowship program? The McGill GREI fellowship offers a rich clinical and academic training environment with exposure to a broad spectrum of infertility care and reproductive endocrinology. The program provides a high clinical volume with extensive hands-on experience in ultrasound, procedures, and complex clinical decision-making. Fellows gain meaningful exposure to medically complex patients, fertility preservation, recurrent pregnancy loss, and a wide range of reproductive endocrinology conditions. A major strength of the program is its exceptional mentorship. The faculty are leaders in the field and are deeply committed to fellow education, career development, and well-being, fostering a supportive and collaborative culture. Another unique strength is the diversity of the fellowship group-our co-fellows come from across Quebec, Canada, and around the world. This creates a rich learning environment where we learn from one another through peer teaching and by sharing different perspectives, training backgrounds, and approaches to care from across global health systems. In addition, McGill has a strong research program, offering outstanding mentorship and opportunities for high-impact academic productivity.

What advice would you give to residents interested in your fellowship program? I would encourage residents considering GREI to pursue elective time in reproductive endocrinology early in training. Visiting programs and experiencing the day-to-day learning environment can be incredibly helpful when making fellowship decisions. I also recommend reaching out to current fellows and faculty with questions-the McGill GREI program values curiosity, initiative, and engagement. Being open to both the clinical and research aspects of the field is essential to developing confidence and expertise.

What do you hope your future practice will look like? I envision a future practice that provides comprehensive, inclusive fertility care for patients of diverse backgrounds, identities, relationships, and family-building goals. I hope to combine clinical care with ongoing research and teaching, contributing to advances in reproductive health while mentoring future trainees in the field.
