Pregnant women with COVID-19 exposure

Symptomatic

- COVID-19–positive or unknown
  - Droplet/contact precautions
  - Consider hospital admission if medically indicated*

Asymptomatic

- COVID-19–negative
  - Consider other respiratory pathogens and supportive care in hospital if indicated by clinical status
  - Home monitoring. Testing if indicated as per local protocol

Antepartum
- Maternal surveillance including vital signs as indicated by severity and/or obstetric early warning protocol
- Fetal surveillance including monthly ultrasounds for anatomy, fluid and growth

Intrapartum
- Timing and mode of delivery governed by obstetric Indications
- Droplet/contact precautions
- Consideration for personal protective equipment with N95 respiratory for cesarean delivery (possibly required for intubation)
- Delayed cord clamping*

Postpartum / newborn care
- Continue droplet/contact precautions for mother and infant
- Mother to mask for breastfeeding*
- No isolation of infant from mother unless clinically indicated by disease severity*
- COVID-19 testing for infant

*Decisions related to separation of mother and baby, breastfeeding and delayed cord clamping should be made in collaboration with the patient and her family, taking into consideration available evidence as well as patient’s values
